Company recommendations:

Targets: The company requires targets which are comprehensive enough to hold management to account for short, medium and long-term action to reduce emissions. The company requires a net zero target covering all of its emissions.

Emissions reductions and reporting: The company's emissions contrast with its 1.5°C pathway which requires it to make substantial decreases in its emissions intensity.

Low-carbon CapEx: The company's CapEx reporting does not provide sufficient detail to show its financial commitment to climate mitigation. Improved disclosure will allow for this assessment, specifically providing the breakdown of what low-carbon opportunities are covered in their CapEx.

Transition plan: The company can improve the elements of its transition plan by ensuring it includes verifiable and quantifiable key performance indicators and financial commitments. The plan should be informed by scenario analysis to ensure that the plan's ambition is sufficient for a 1.5°C pathway.
