Company recommendations:

**Targets**: To be effective the company requires targets which account for the majority of its emissions.

**Emissions reductions and reporting**: The company’s emissions contrast with its 1.5°C pathway which requires it to make substantial decreases in its emissions intensity.

**Low-carbon CapEx**: The company’s CapEx reporting does not provide sufficient detail to show its financial commitment to climate mitigation. Improved disclosure will allow for this assessment.

**Transition plan**: The company can improve the elements of its transition plan by ensuring it includes medium and long-term targets, verifiable and quantifiable key performance indicators and financial commitments. The plan should be informed by scenario analysis to ensure that the plan’s ambition is sufficient for a 1.5°C pathway.
